

## **INTERNET ABUSE CAN KILL A COMPANY – WHAT CAN YOU DO ABOUT IT?**

*Mike Melton, President of United Systems, Inc., Provides Useful Policies*

QUINCY, IL — November 29, 2010 — The Internet has proven itself to be one of the most powerful tools known to man. It has completely transformed the way we interact, the way we learn, and the way that we do business with each other. However, with such a robust tool at our fingertips we've become so infatuated with technology that we no longer question whether or not it's actually making us more productive. We can access anything we want, at any time, from any place, but is that actually a good thing?

According to most SMBs, the answer is "it depends." Allowing open Internet access to any and all technology can reduce productivity, expose the network to security threats, jam up bandwidth, deteriorate the quality of service in IP based applications and slow down critical programs that are running the business. However, most organizations are finding the "happy medium" through establishing what are called Acceptable Use Policies (AUPs). Also known as policies of utilization, these are simply a set of rules and procedures by which all employees must adhere to when interacting with technology. By now large companies are expected in

utilize AUPs, and small to medium-sized businesses (SMBs) are beginning to see the value in establishing a set of policies in their own right.

One topic that AUPs cover revolves around what software employees should be able to access during work. One suggested policy is that employees should be able to access whatever software they need in order to become more productive, as long as they receive approval from the IT department. This is one of the safest policies to have in place, but it is also one of the most time-consuming to enforce. One way to get around this obstacle is to utilize a Technology Advisor, who can recommend specific programs and applications to use, and which to avoid. Unless you're working with an abundance of IT resources, many companies are looking to outsource these sorts of mundane procedures to Managed Service Providers (MSPs) at a much lower cost. Business owners are usually thrilled with these sorts of changes because their employees can now spend less time performing brainless Microsoft Office installations, and more time working on their primary objectives.

The Internet is another key area that needs to be regulated because SMBs need to make

sure that they're not exposing themselves to security breaches. According to Businessweek.com, "70% of Internet porn traffic occurs between the hours of 9am and 5pm." Aside from its vulgar nature, this sort of content is plagued with all sorts of dangerous viruses, spyware and malware. Now as much as we want to plug our ears and shout "La-la-la, I can't hear you" this is a reality and needs to be dealt with.

SMBs can examine a few different steps to start to get back on track. Firstly, the obvious sites need to be blocked; this means anything that contains obscene, hateful, pornographic, unlawful, violent or illegal materials. Secondly, sites that require large amounts of streaming data, (ex: sites that stream television, videos or music) need to be monitored all the way down to the appliance and the system needs to automatically dump users off these sites if network performance is threatened. Similar capabilities should be required for social networking sites like Facebook.com and Myspace.com as they are detrimental to productivity and are huge distractions.

While many SMBs may be quick to blanket-ban all of these sites, there are consequences that may result in decreased

morale. Imagine how frustrating it would be to be denied access to your online banking at work. Consider how helpful music can be for creative professionals, while how much morale could be improved by allowing employees to watch their favorite online television shows at work, provided that it was during the lunch hour of course. Other employees could benefit from having the freedom to learn from educational sites and heighten their expertise. All of these enhance the value of every employee and drive productivity and a positive company culture. While constant monitoring is non-negotiable, most of these

types of issues can be easily resolved through compromise.

The key in establishing a successful policy is creating one that is complete, efficient and moves with the development of new technology. At the end of the day its purpose is to safeguard the company from risks and propel the company forward to a brighter, more profitable future.

#### **ABOUT UNITED SYSTEMS, INC.**

Founded in 1986, United Systems, Inc. is committed to establishing and maintaining a dynamic partnership with every

customer. Extensive technology and service experience allows the United Systems, Inc. team to develop an understanding of each customer's unique requirements, and to respond to those requirements quickly and effectively.

Our mission is that we are in business to serve every customer in the tri-state area with priority service. Our goal is to make their businesses profitable and provide a competitive edge with the use of technology and services.

For more information on United Systems, Inc., call (217) 228-0315 or visit [www.4unitedsystems.com](http://www.4unitedsystems.com).
