

## **UNITED SYSTEMS, INC. PROVIDES REMOTE PERFORMANCE MANAGEMENT SOLUTIONS TO CUSTOMERS**

*Leading Unified Communications  
Provider Helps Customers Pre-Assess  
and Continuously Monitor Network  
Infrastructure for Smooth Operations*

QUINCY, IL – February 28, 2011 – United Systems, Inc., an industry leader in unified communications, announced today that the company is providing its customers with Remote Performance Management Solutions. This technology offers a cost-effective remote monitoring and management capability to diagnose underlying network problems, assess network readiness and monitor application performance. This advancement is allowing businesses to capitalize on powerful applications such as VoIP, video, SaaS/ cloud services, disaster recovery and desktop virtualization.

Gartner analysts caution that “75 percent of enterprises that do not perform a pre-implementation analysis of their IP network infrastructure will not achieve a successful VoIP implementation.” Transitioning physically separate voice and data networks onto a single shared infrastructure without compromising the quality of either voice traffic or data traffic will require new practices and procedures. Remote Performance Management Solutions play a

central role in successful network assessment.

“The cloud is growing and as a result businesses are becoming increasingly dependent on cloud-based technologies to run their businesses,” commented Mike Melton, President of United Systems. “One example revolves around VoIP technology. Many business owners are attracted to VoIP because of its cost savings and applications that drive employee productivity; however some business owners hesitate because they are concerned about sacrificing call quality. This often occurs when companies conduct business with a technology provider that does not have the proper technical expertise or the tools to successfully deploy IP based solutions. Leveraging advanced Remote Performance Management Software pinpoint network drains, all the way down to the appliance. The tool provides valuable insight that can determine which appliance such as a PC within an organization is sucking up bandwidth causing poor voice or video quality.”

In order to keep up with the rapid pace of technology, data networks will need to become much stronger, faster, flexible and transparent. The success of a business’s operations will be strongly correlated to network

performance and Remote Performance Management Solutions allow businesses to diagnose network issues and resolve problems immediately. Data networks are the lifeblood of business operations and companies like United Systems are proactively protecting their customers, increasing their profitability and providing them with a competitive advantage.

### **ABOUT UNITED SYSTEMS, INC.**

Founded in 1986, United Systems, Inc. is committed to establishing and maintaining a dynamic partnership with every customer. Extensive technology and service experience allows the United Systems, Inc. team to develop an understanding of each customer’s unique requirements, and to respond to those requirements quickly and effectively.

Our mission is that we are in business to serve every customer in the tri-state area with priority service. Our goal is to make their businesses profitable and provide a competitive edge with the use of technology and services.
